

Scenario:

You are a college student in a city. You love to go running and like to be environmentally friendly, so you keep a refillable water bottle on you instead of a plastic one. You find yourself getting lost in the city and never remembering where things are, so you would like a work-out route with included water bottle stations

Task 1: Mark your run on a map and get suggestions on where you should stop off and get water

Task 2: After the run save it to your favorite workouts

Task 3: Rate the location of the water bottle stations on multiple factors such as cleanliness, safety, and accessibility.

Person 1:

Good	Bad
Figured out where to go to create a run	Could not figure out how to save a workout after it was completed, it was not clear, and it was within a tab that had multiple options
Liked the ability to see where they were on the map and where the nearest water bottle stations were	The user wanted recommended routes to take to go on a run
Liked the ability to use 3 different star system to rate the station	Could not put comments on it, which they wanted to do

Person 2:

Good	Bad
Used the 3 different rating systems for the water bottle stations and they loved the application with three stars	No back button after the run, forced to use other options
Enjoyed the display in the app, was easy to find most things and wanted to explore the app	The run did not have information such as the time it took for the run
It allowed the user to zoom out and see where they were on the map and where they were in reference to water bottle stations	They did not like that they could not have to app track them instead of marking where you went on a run

Person 3:

Good	Bad
Liked the UI and how it was able to handle a lot of information and still look good	Did not know where to start with the app, did not even click the right location
Allowed for the user to input their run by drawing lines directly on the map	Was confused about how the app knew where everything was, maybe add an information tab
Wanted the app to recommend a better running route after the run ended	They wanted to name their saved workout instead of having it just display the route
